## Student Information System

## Award Information

The District requested proposals for a new Student Information System (SIS) with the core purpose of this system to store, schedule, and report student data for the district to the state. Four responses were received. The Assessment, Intervention, and Data Services (AID) office reviewed the responses, two companies were eliminated due to missing essential functionality and the remaining two companies provided virtual interviews and demos.

The District is recommending the purchase of this system from Computer Information Concepts, Inc. (CIC), the Missouri Infinite Campus Channel Partner, for the Infinite Campus system. Infinite Campus meets all requirements and needs of the District. Over 60 staff and teachers participated in two software demos with Infinite Campus, learning about the system's features and functionality. The overwhelming majority of participants rated Infinite Campus as Exceeding Expectations. The purchase of Infinite Campus will provide a robust, reliable, and flexible system to meet the needs of all CPS constituents: staff, teachers, students, and families.
