Award Result

RFP NO. 15/04
Network Infrastructure Project
March 14, 2014
Award To: JMA, Overland Park, KS

The 10Gig switch upgrade in Battle High School, Career Center, Hickman High School and Rock Bridge High School will assist in several different areas. The first is that all network links between switches are being upgraded to 10Gig fiber, which will allow for faster network connectivity for all computers within these buildings. This will have an impact on both desktop and mobile computers/devices. The second is that these new switches will allow for the new VoIP phones to be able to work off of any network jack in the building, aiding in timely phone changes for office locations. Finally, the new switching platform has many state-of-the-art features that will allow for a more stable and easily managed network infrastructure.
